LEEUEW CURRENT

The Leeuew Current is most predominant during
May-August with a surface current generally less
than 1.0kn. It has an average width of 30 nautical
miles and extends to a depth of approximately
200 metres, carrying warm, low salinity water from
the North West Shelf area along the continental
shelf south to Cape Leeuew and then east into the
Great Australian Bight. For details of currents
generally, refer to R.A.N. Australian Pilot Vol 1.

ROCK LOBSTER FISHERY

Between November and June, extensive lobster
fishing takes place between Latitudes 24° S and
34° S. Mariners are advised to keep well clear of
lobster pot floats and submerged lines.

SPEED - DISTANCE - TIME LOGARITHMIC NOMOGRAM

To find Speed, Distance or Time
Interval, draw a line through any
two factors, then interpolate for
the unknown factor.
